McMaster University, Hamilton, ON

- Development and innovative application of advanced R functions, simulations, data analysis, data visualization and other computational techniques to research phenomenon in molecular evolution and bacterial genomics.
- Familiarization with bioinformatics tools and pipelines related to data visualization, genomic data analysis, genetics, sequence annotation, molecular evolution, gene expression, and genome assembly.
- Considerable training in high performance computing and programming (Unix/Linux), data visualization, statistical analysis, big data storage, and software tool development (Bio-Conductor libraries) and version control (Git.)
- Independently modified and developed tools for bio-statistical testing and analytical processes using R, R-shiny interactive graphics and Python, resulting in a first author publication [1].
- Grant and paper writing knowledge and involvement.
- Collaborated with students, professors and other academics from the Anthropology, Health Sciences, Mathematics, and Statistics departments on completing projects related to infectious disease, ancient DNA, and molecular evolution in a timely and reliable manner.
- Independently managed undergraduate student research projects by providing vision and direction regarding working process, research, and task distribution resulting in a successful project.
- Communicating scientific research to field specific and general audiences of up to 230 people at 4 international conferences, culminating in overwhelming positive presentation feedback.
- Awarded National and local funding for research by editing and writing grants outlining the proposed and completed research on molecular evolution.
